SUMMARY

Frontend Developer with experience building scalable digital products in fintech, e-commerce, and high-traffic environments. My work has focused primarily on React, Vue.js, and TypeScript, developing maintainable interfaces, reliable integrations, and reusable components with a strong emphasis on performance, accessibility, and production stability. I've collaborated with international backend, QA, design, and product teams, contributing across implementation, debugging, testing, and continuous improvement of business-critical user flows.

SKILLS

React, TypeScript, JavaScript, REST APIs, GraphQL, Vue.js, Tailwind CSS, Playwright, Responsive UI, Node.js, Git

WORK EXPERIENCE

Frontend Developer | Independent Professional (Contract / Freelance)

06/2025 – Present, Spain, Austria

- Delivered frontend improvements to production web interfaces, forms, and user flows using JavaScript and TypeScript, resolving issues and refining behavior in live environments
- Built a modular conversational interface in Vue.js and TypeScript, separating UI, logic, and types for maintainability and future growth
- Connected frontend flows with CMS, forms, and automation tools to streamline lead capture, communication, and operational handoffs
- Implemented automation workflows with Make and n8n to reduce manual steps tied to customer-facing processes

Fullstack Developer | IT Globers

02/2023 – 06/2025, Valencia, Spain

- Built and maintained customer-facing storefront features in VTEX IO using React and TypeScript for high-traffic e-commerce environments
- Integrated REST and GraphQL services into user flows, helping keep frontend behavior consistent and maintainable across releases
- Protected critical journeys such as login, checkout, and order management with Playwright end-to-end tests
- Improved responsiveness, accessibility, and release stability by triaging production issues and shipping targeted frontend fixes

Frontend Developer | Grupo Salinas

08/2022 – 02/2023, Mexico City, Mexico

- Developed high-traffic interfaces for Elektra using React, JavaScript, and Tailwind CSS, integrating REST APIs into customer-facing flows
- Turned Figma designs into accessible, responsive, production-ready screens while preserving visual quality and usability
- Built reusable modules and shared UI patterns to keep delivery faster and the experience consistent across features
- Improved accessibility, mobile responsiveness, and load performance across key frontend flows

Fullstack Developer | Layer 7

05/2021 – 04/2022, Mexico City, Mexico

- Developed microservices with PHP, Laravel, and Symfony to manage campaign queues and route over 400M calls per month.
- Designed and optimized SQL queries and operational dashboards for large-scale data processing.
- Integrated REST services and strengthened security through authentication and encryption.
- Implemented automated tests with PHPUnit to improve software reliability in critical environments.

Fullstack Developer | Blumonpay

10/2018 – 02/2021, Mexico City, Mexico

- Built internal dashboards and operational web applications for POS and banking-related processes, focusing on performance, clarity, and reliability
- Developed Vue.js and JavaScript interfaces connected to REST services to support day-to-day operations and monitoring needs
- Created real-time monitoring views and KPI dashboards to improve operational visibility and decision-making
- Automated functional tests with Selenium to reduce regression risk in sensitive forms and workflows

LANGUAGES

Spanish (Native)

English (Fluent)

German (Basic)

EDUCATION

Postgraduate Certificate - Change Agent and Expert in Digital Transformation | SMEs (CEF)

06/2025 – 10/2025, Valencia, Spain

- Concentrated on process improvement, customer experience, Industry 4.0 enablers, and change management. The final project produced a practical transformation plan complete with KPIs and an implementation roadmap.

Bachelor's Degree - Software Engineering | Universidad Politécnica del Valle de México

09/2014 – 08/2018, Mexico, Mexico

- Strong foundation in software development, algorithms, databases, networking, cybersecurity, operating systems, software architecture, requirements analysis, and agile methodologies.
